

PROJECT TITLE

# Self-record Attendance System

PRESENTORS:  
ALVE, GABRIEL AARON L.  
OREJOLA, CLAIRE L.

CS-2 PROJECT PROPOSAL:  
PRESENTAITON

## PROBLEM STATEMENT

The procedures for the current attendance system involve mainly manual work/processes. Though these processes of the attendance system make it functional, we noticed that some processes could be “more efficient” (Alve, 2025). Here are some examples (Examples only)

Example 1: On November 21, 2025, specifically during Noise vs. Voice Talk Attendance

Example 2: Role of Homeroom / Class Adviser in Student’s attendance (Based on the PSHSS CIM 7.0 Student’s Attendance V2\_Rev1.pdf)

What do you want to mainly achieve in this project?

Attempt to solve the issues mentioned by developing an attendance system that let’s students to record their attendance (considering measures for data integrity), and helps with making an attendance summary of students. That way, the friction of Student’s attendance can generally reduce (Alve, 2025).

## PROBLEM STATEMENT

Cons of manual attendance system procedures:

### **1. Prone to Human Error/s**

Errors such as incorrect/duplicate entries, typos, fraudulence, and etc. can accumulate over time and cause a growing impact (Ex: Delayed Intervention/s)

### **2. Time Consuming / Labor Extensive**

Manual attendance system procedures can require significant amount of time and effort.

### **3. Limited real-time visibility**

If there are no real-time, efficient insights in consolidating attendance data, it can result to effects such as wasted time/effort, shift scheduling, etc.

4. Trust Issues

5. Risk of Data Loss

6. Fraud Susceptibility

7. Compliance risks

## PROJECT OBJECTIVES

## (GUIDE) QUESTIONS

### **Specific**

What is the goal of your CS-2 Year-long project? What do you want to accomplish?

### **Measurable**

How will you know that you've met your goal? What will you use to measure progress/outcome?

### **Achievable**

Is the project doable? What challenges might occur in doing this? Do you have the necessary skills and resources?

### **Relevant**

Why does the outcome of your project matter, and how does it align with your general goals of this project?

### **Time-bound**

What is the time frame of your goal? What is the deadline, and is it realistic?

CS-2 PROJECT PROPOSAL:  
PRESENTATION

## PROJECT OBJECTIVES

## ANSWERS

### **Specific**

Develop (Python program) a self-record automated attendance for students in order to transition from manual to automated attendance, avoids false negatives/positives, and can be counterchecked with the student's recording.

### **Measurable**

The project's output can be tested by comparing the time spent on attendance checking and checking if false positives/negatives can occur and their effect. Additionally, consider whether the time spent for the Classroom/Homeroom adviser's role for Student's attendance has reduced.

### **Achievable**

We believe that the project is doable, given that we understand the concept of our project, know what requirements are needed in this project, have access to online sources if needed, and have 3 Quarters to finish it.

## PROJECT OBJECTIVES

## ANSWERS

### Relevant

To align with the “Scope” section in the CS-2 Year-long project walkthrough and create an attendance system that could reducing time in recording attendance and overall make attendance systems have less friction

### Time-bound

Finalize and test the Self-record Attendance System project on or before the end of the 4th quarter (Additionally follow the guidelines for CS 2 Project Walkthrough)

## PLANNED FEATURES

- Log in and log out program feature

User will have to “log in” and “log out” of the program. Logging in requires your account name and password. It can be clear who the student is and can be reflected in attendance.

- Option to (Create/Fill Out/View) an attendance

Create: Involves, PIN/Password/Key, Time to start/stop checking attendance, required fields

Fill out: Involves inputting attendance PIN, filling out required field/s, providing “counter checking”

View: Gives list of attendance you’re involved and the status of it. Can include summary report

- Current Time Utilization for checking attendance

Attendance checks time the attendee has recorded their attendance and decides if it should be present/absent/tardy/cutting classes (Program will check time of recording. User will not input the time)

- Settings Feature (Change account password, managing attendance view list, format, appearance)

## PLANNED INPUTS & OUTPUTS

1. Program asking for account name and password
2. Programming checking if account name exists and matches with password
3. Creating an attendance
4. Viewing attendances
5. Summary Report of Attendance
6. Filling out an attendance
7. Counter checking attendance
8. Settings
9. Logging Out

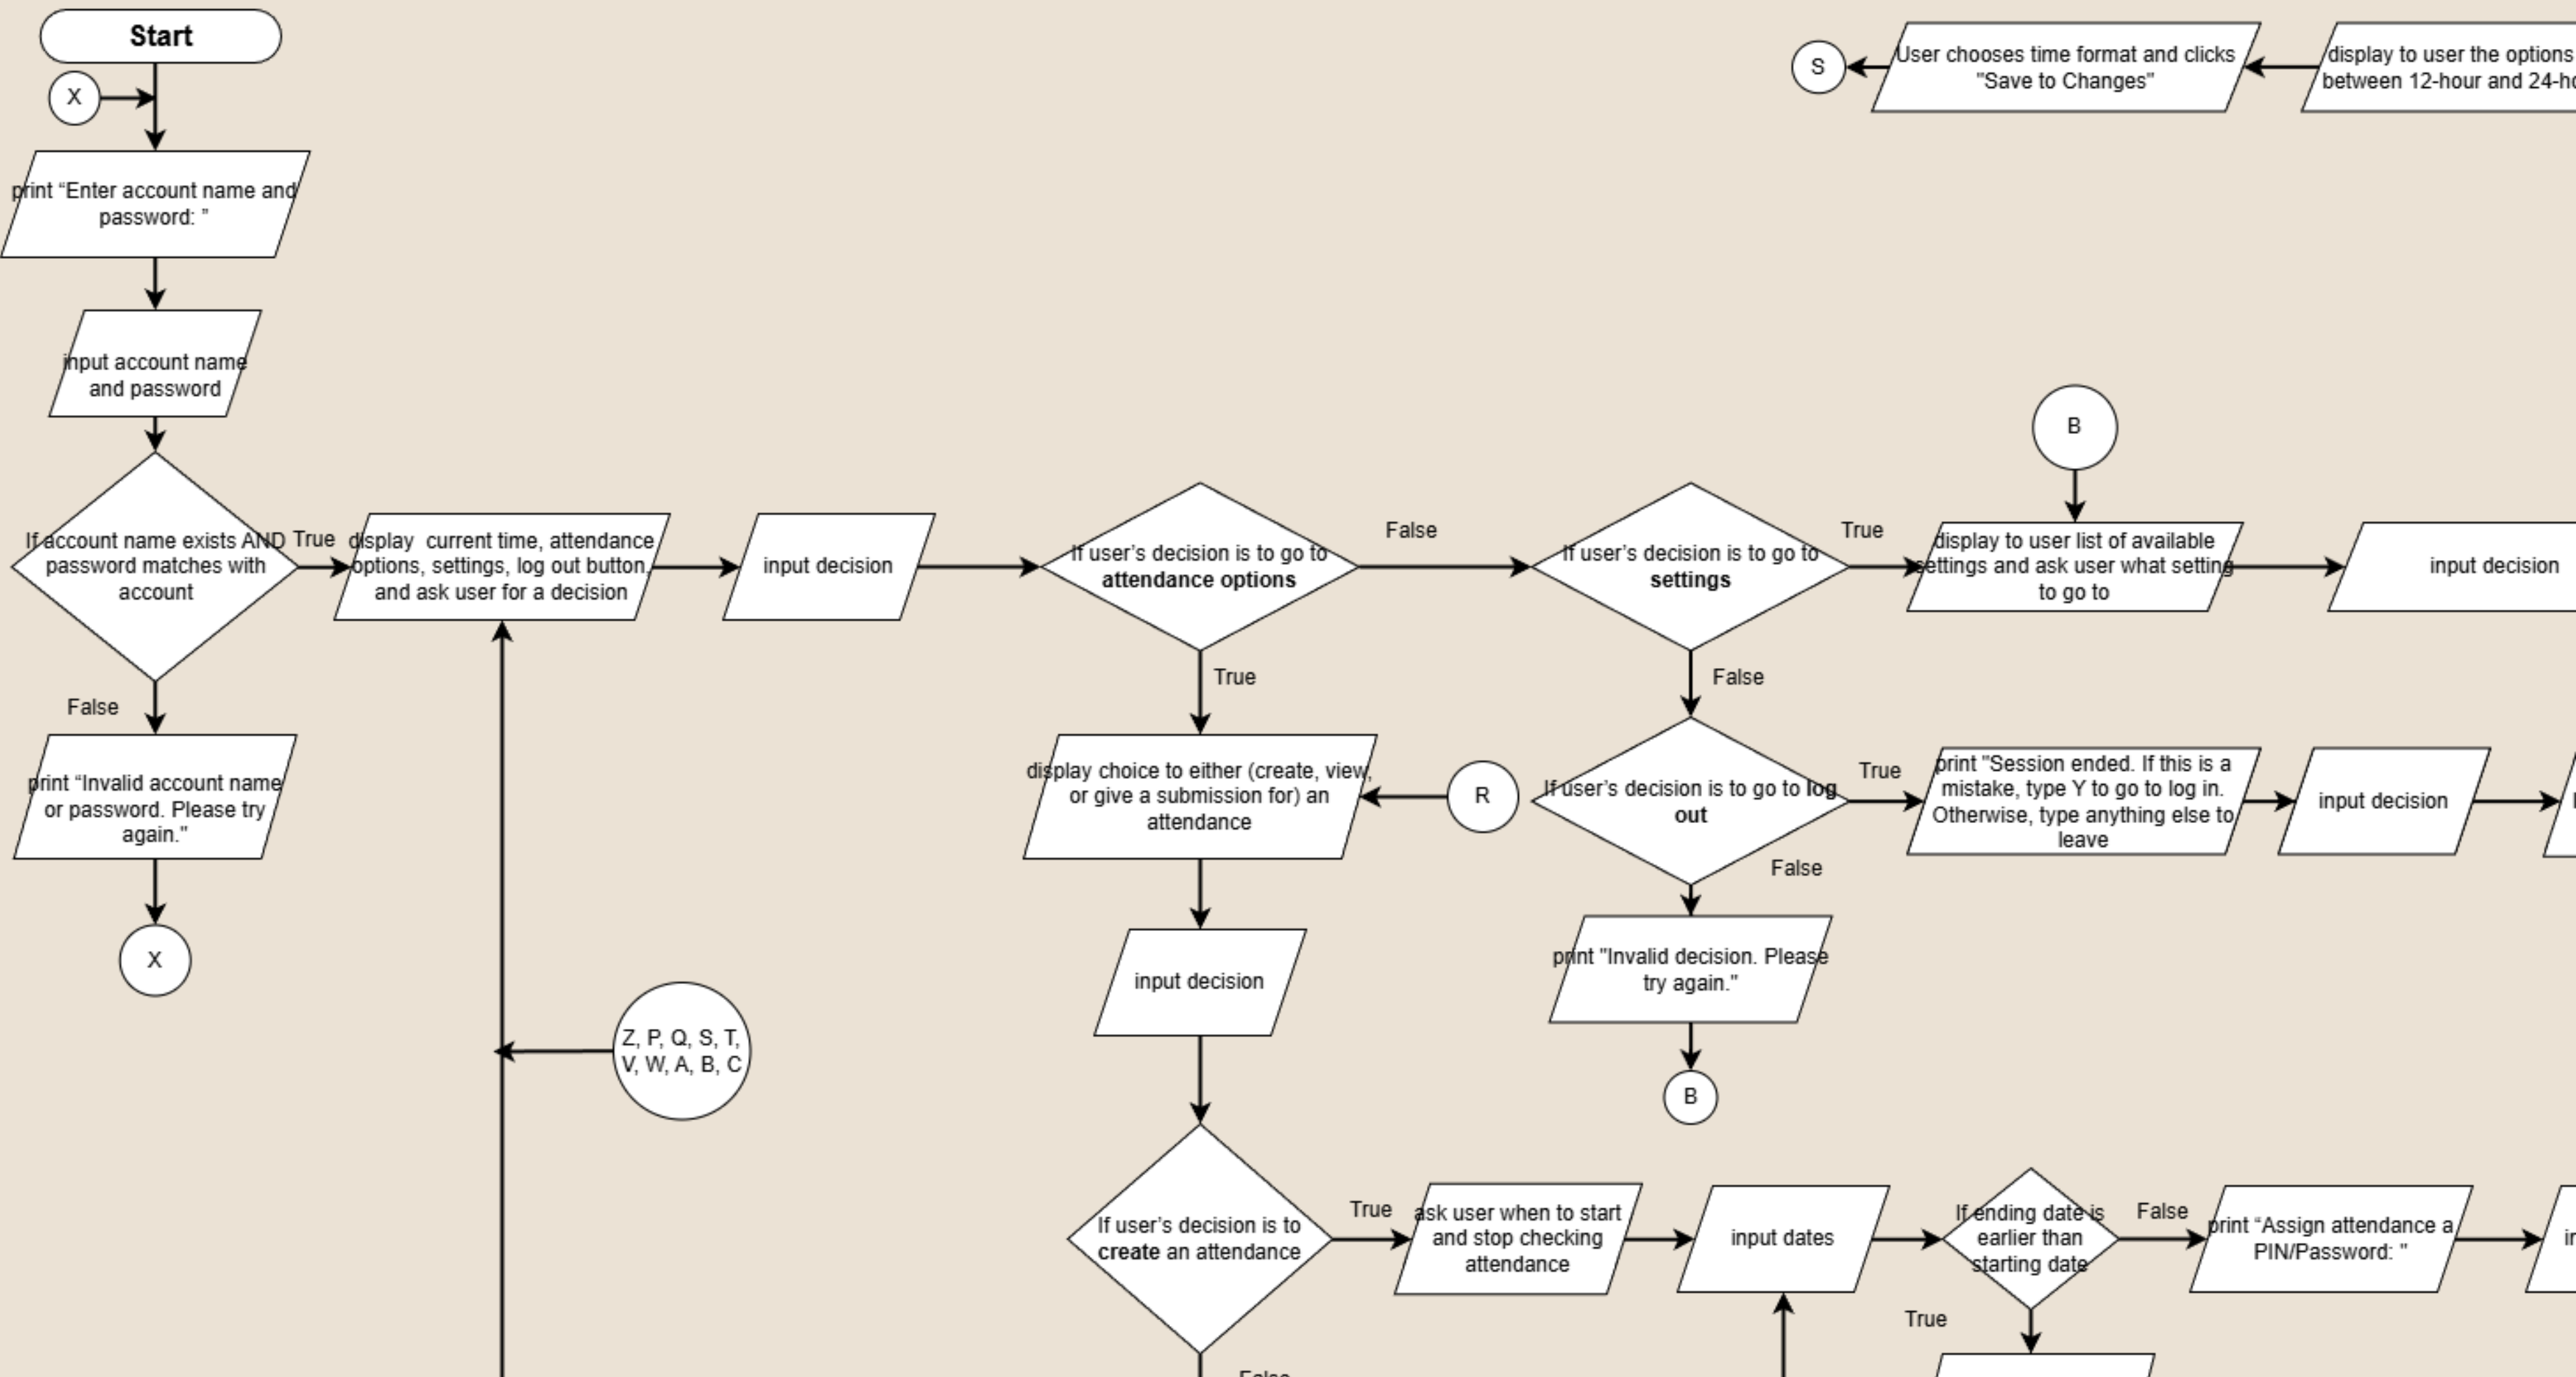

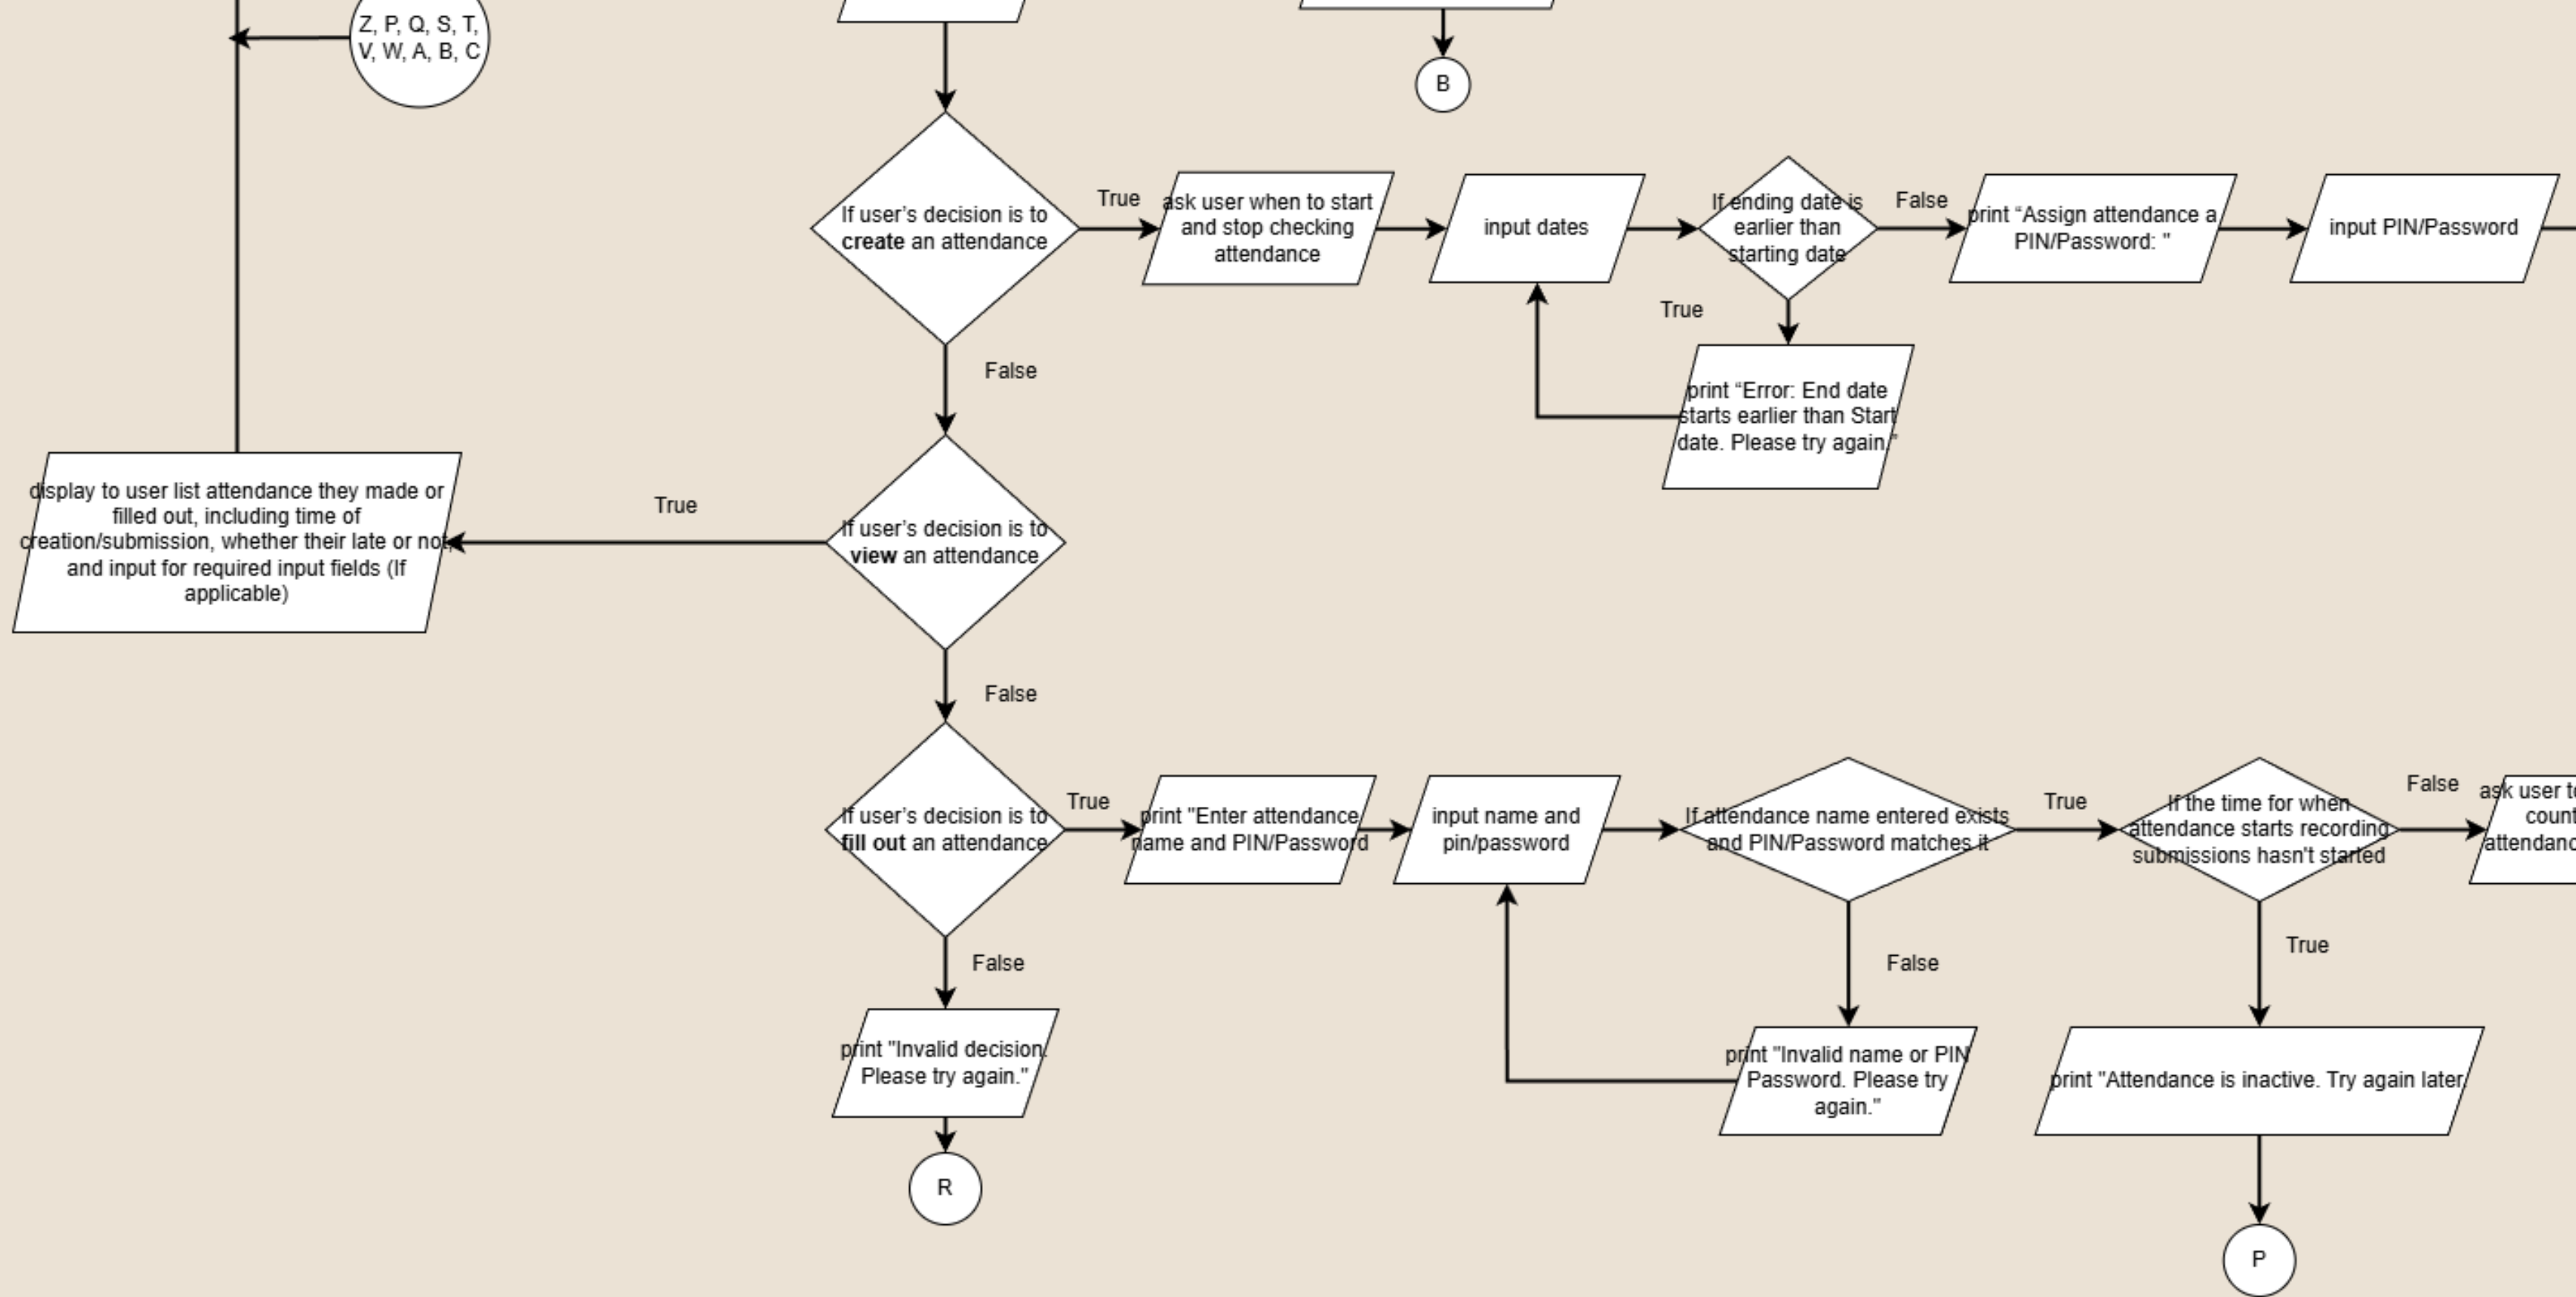

# LOGIC PLAN

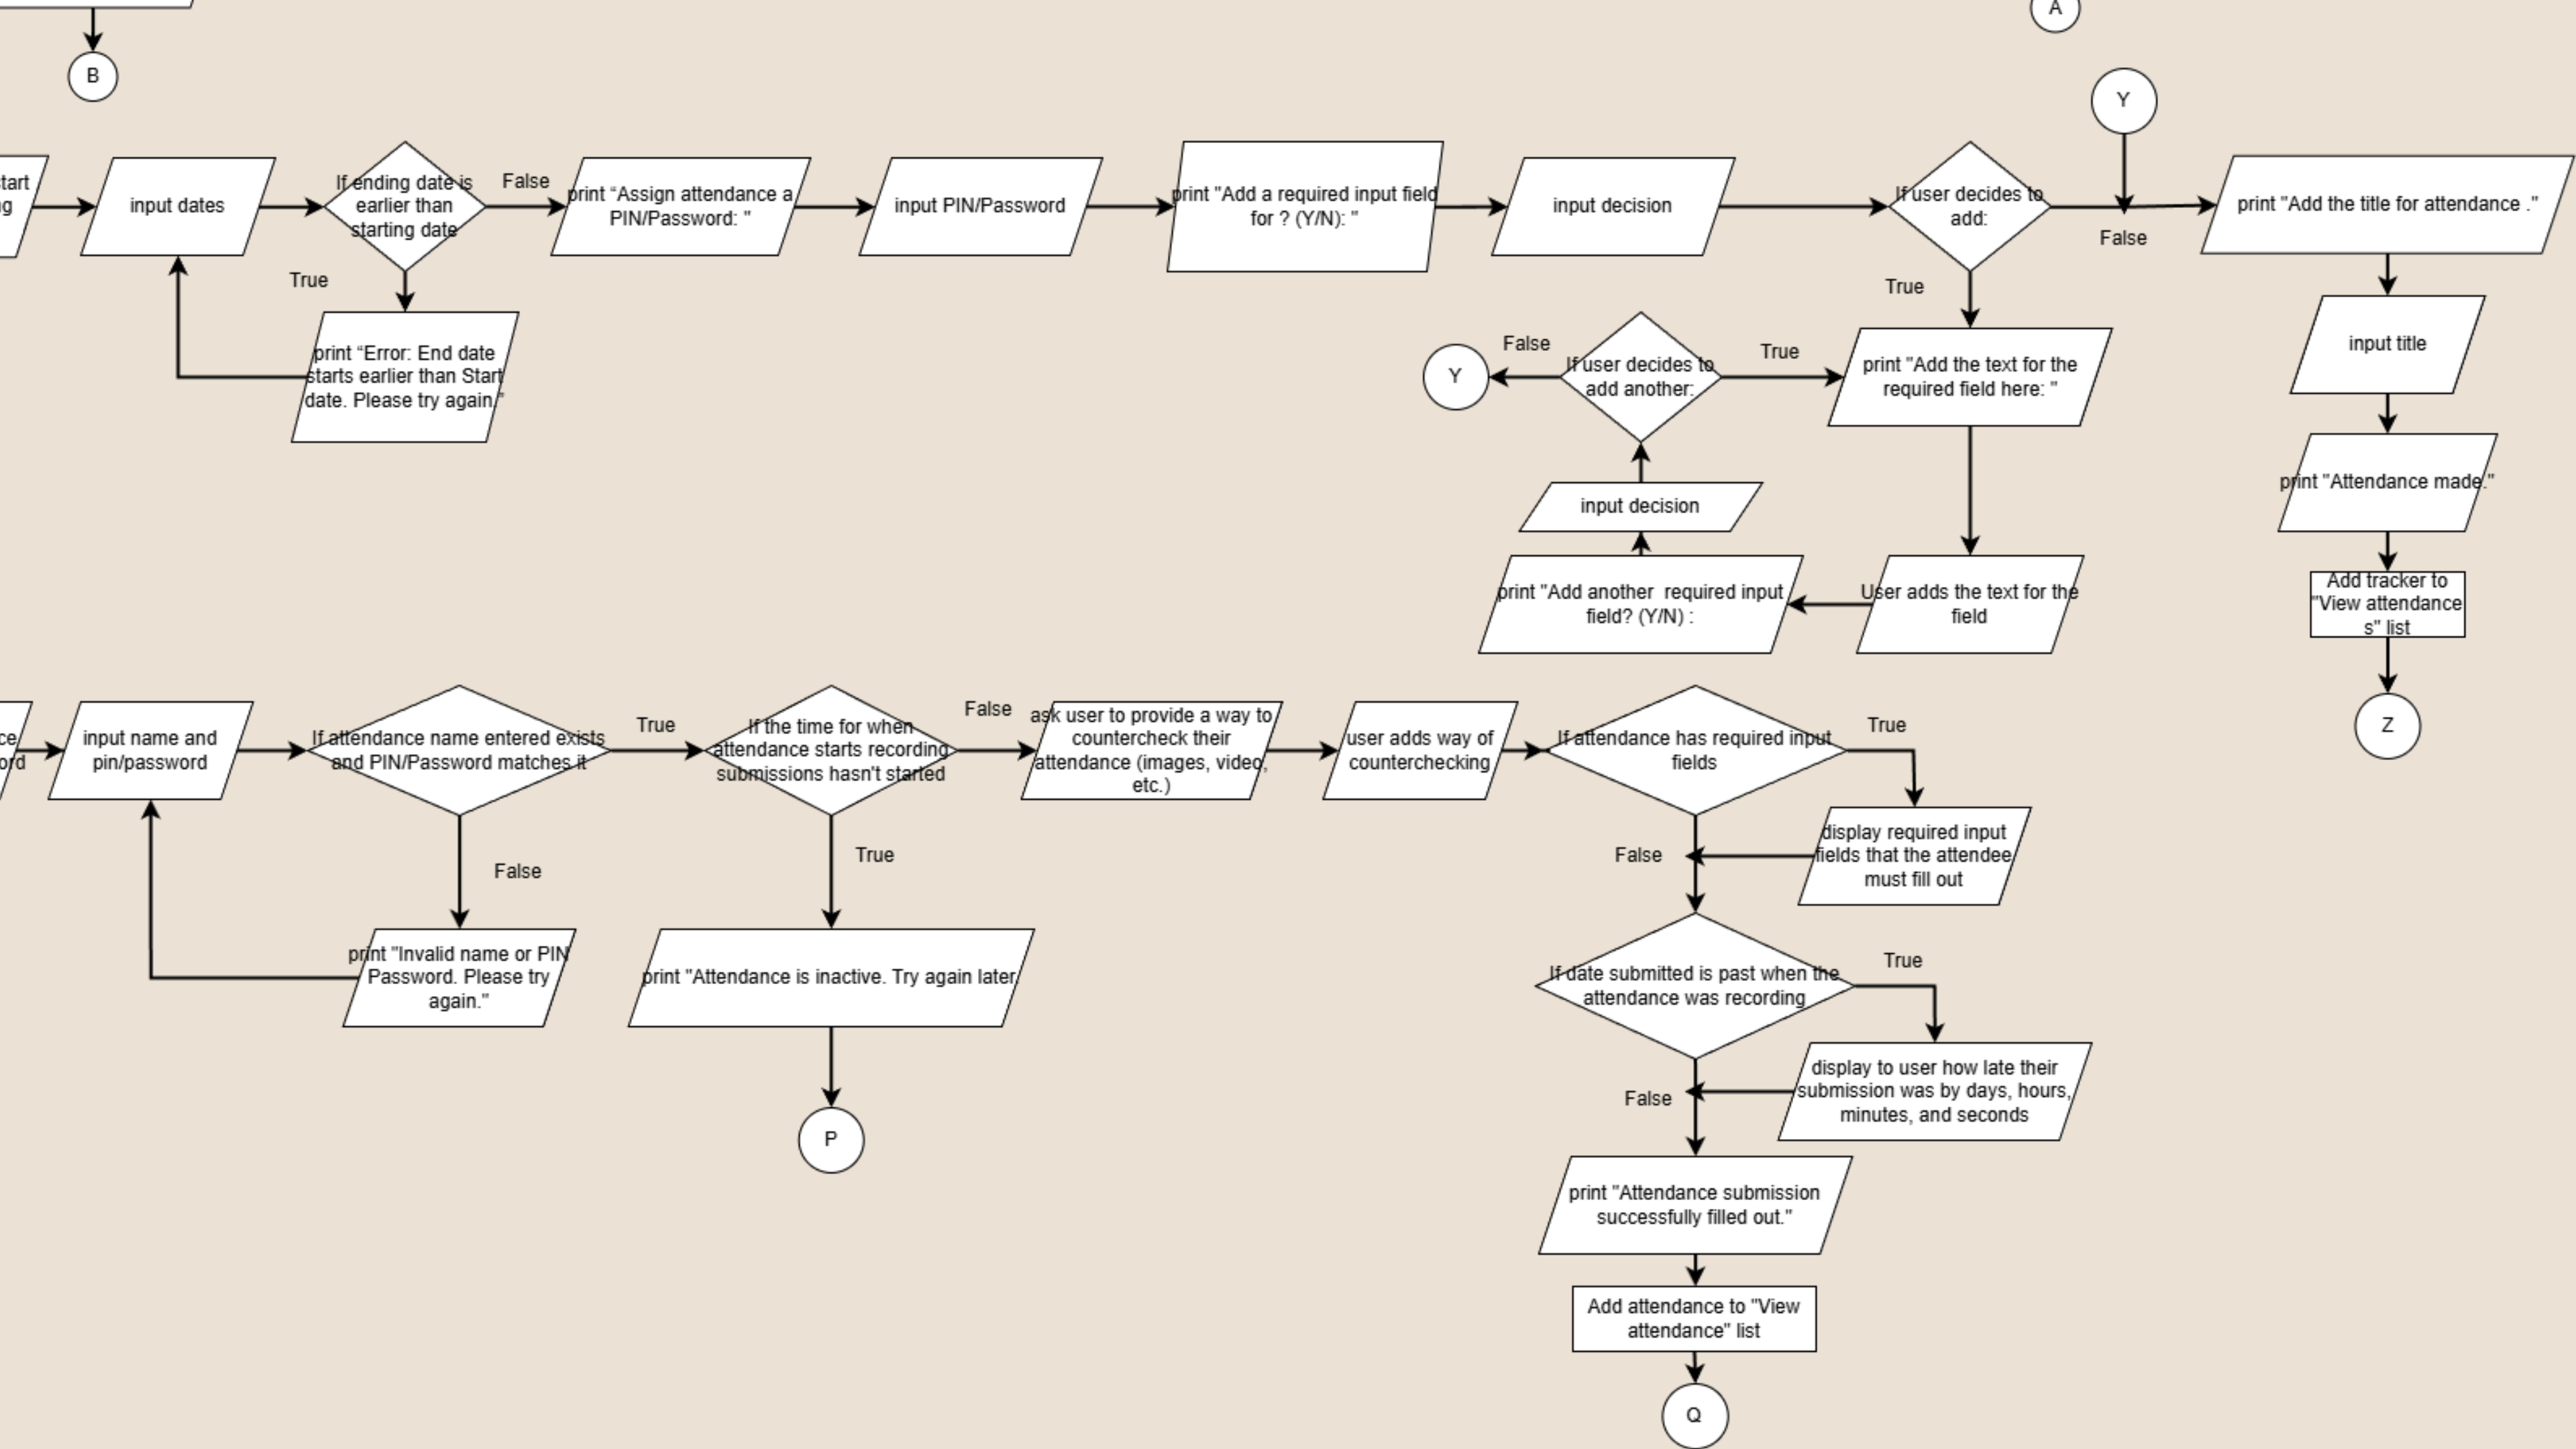

Order of slides for PFD:

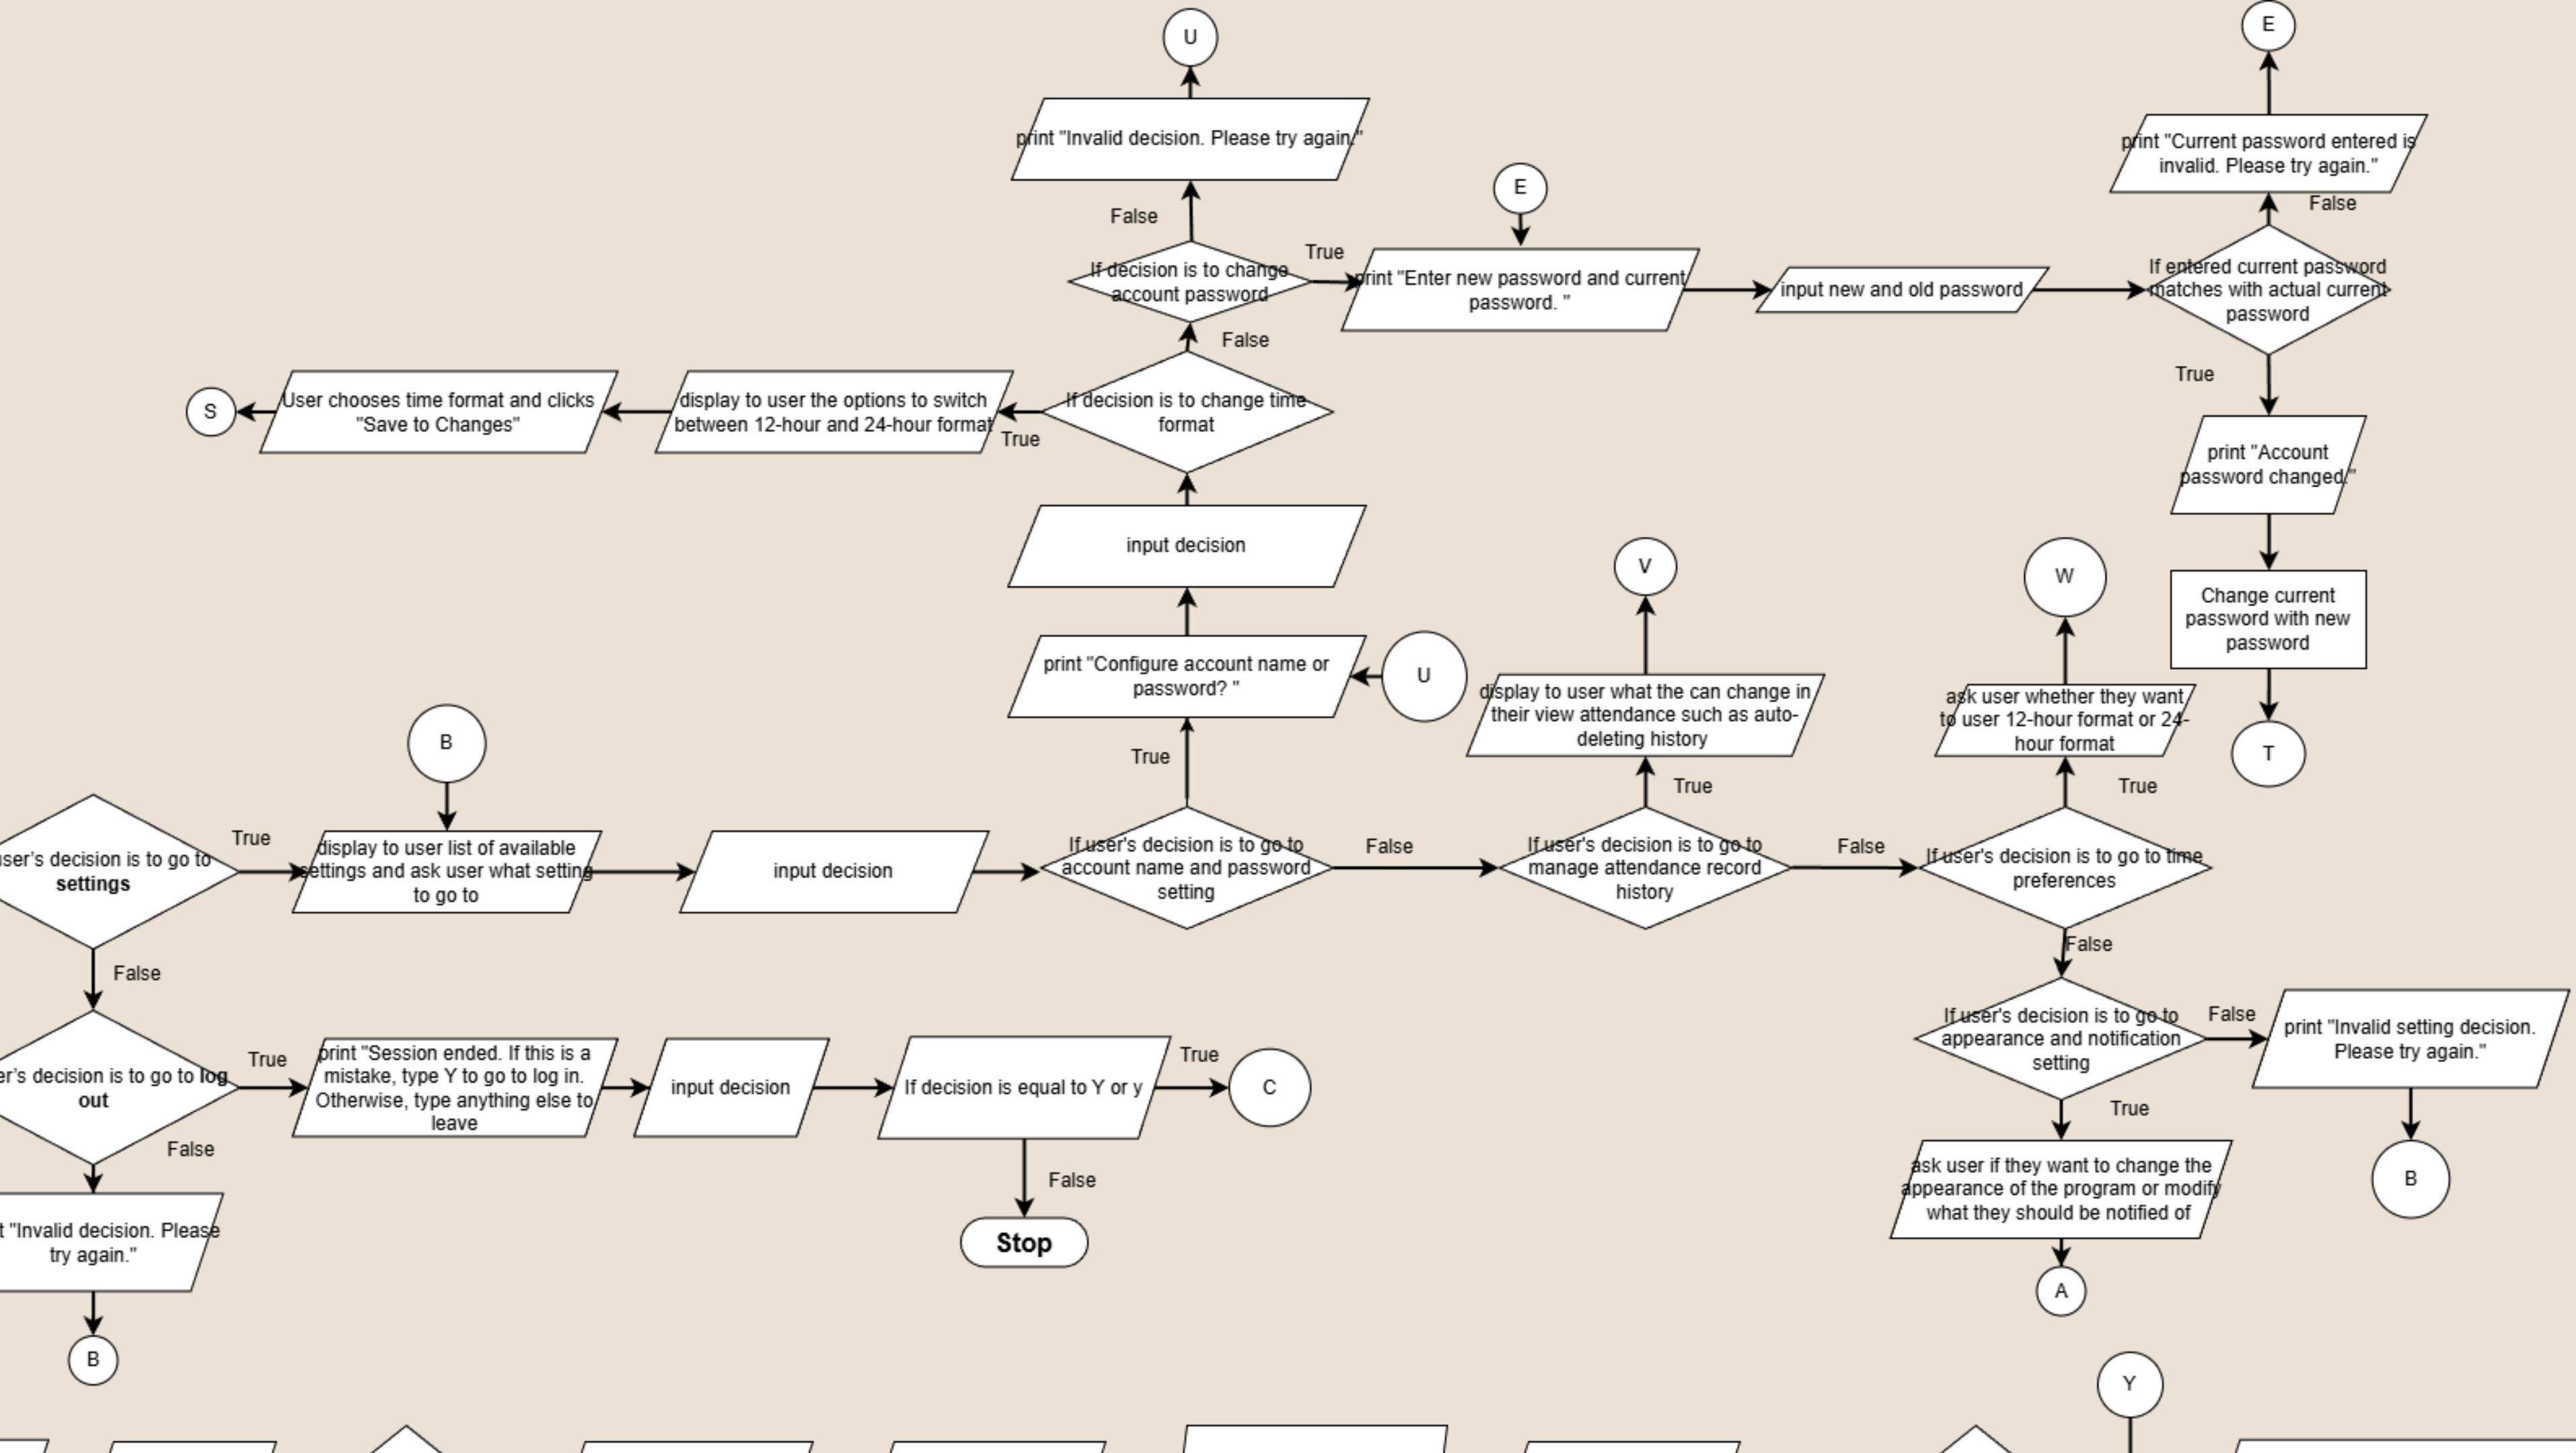

- Top Left
- Bottom Left
- Bottom Right
- Top Right

CS-2 PROJECT PROPOSAL:  
PRESENTATION

## EXAMPLE:

1. User inputs their account name and password

Self-record Attendance System: Log in  
Enter account name: [Name Example]  
Enter account password [Password Example]

2. User is shown the main dashboard

Self-record Attendance System  
Date: [Month Day, Year, HH:MM AM/PM]  
1 - Attendance Options  
2 - Settings  
3 - Log Out  
Enter Decision: 1

## EXAMPLE:

3. User is shown the attendance options

Attendance Options

Date: [Month Day, Year, HH:MM AM/PM]

1 - Create Attendance

2 - View Attendance

3 - Fill out Attendance

Enter Decision: 3

4. User fills out attendance

Enter Attendance Name: [Attendance Name]

Enter corresponding PIN/Password [Password]

Upload counterchecking here: [Counterchecking]

Attendance Filled Out

5. User logs out

Self-record Attendance System

Date: [Month Day, Year, HH:MM AM/PM]

1 - Attendance Options

2 - Settings

3 - Log Out

Enter Decision: 3

END OF PRESENTATION

# Self-record Attendance System

THANK YOU!

PRESENTORS:
